

Generative AI for Real Estate People

A three week course that explains how and why Generative AI is going to have an outsized impact on the real estate industry. You'll learn what it is, and is not, how to interact with the major tools, and how to leverage these technologies for individual, and corporate, competitive advantage.

Taught by: Antony Slumbers, a globally recognised speaker, advisor and writer on PropTech and space-as-a-service. A serial entrepreneur, he has founded and exited several PropTech software companies and now consults real estate boards on their transformation, technology and innovation strategies. He writes an influential blog at antonyslumbers.com

This is his third online course since May 2020, and follows on from the success of 'Future Proof Real Estate' and '#Space as a Service - The Trillion Dollar Hashtag'.

Students have taken part from prestigious real estate companies from 43 countries, across 5 continents.

Syllabus*

The course is focussed on understanding how Generative AI can be utilised across the board within the real estate industry today. Participants will finish the course aware of what is available, how to use the primary tools and why they need to lean in to these new technologies. They will also become part of the TDH network of innovators in real estate.

Week 1

- A 'very' brief History of AI
- What is Generative AI?
- AI - Ecosystems & Customisation
- The 3 Rs of Critical Thinking
